

Dhaman | BE (IT)

Senior Python – AI & Automation Engineer

(Experience 7 Years)

ABOUT ME

AI & Python Developer with strong experience in building AI-powered applications, automation tools, and intelligent agents. Skilled in developing LLM-based solutions, integrating AI APIs, and creating backend services for data processing and automation. Passionate about using AI to solve real-world business problems and improve operational efficiency.

SKILLS

Languages: Python

AI / LLMs: OpenAI, Claude, Gemini

Frameworks: LangChain, CrewAI, AutoGen

Automation: AI agents, workflow automation, n8n

Backend: FastAPI, Flask

Data: Pandas, NumPy

Vector DB: FAISS, Pinecone

Integrations: APIs, webhooks

Tools: Docker, Git, CI/CD

PROFESSIONAL EXPERIENCE

Senior Python – AI & Automation Engineer

Coreway Solution. 2022 – Present

- Designed and developed LLM-powered AI agents for customer support, content processing, and internal automation.
- Built AI-driven workflows using LangChain, CrewAI, and AutoGen to automate multi-step business processes.
- Integrated AI systems with existing web platforms via REST APIs and webhooks.
- Implemented AI-based recommendation and classification logic for real-world business use cases.
- Ensured reliability through logging, retries, validation layers, and fallback mechanisms

Python Automation & Backend Engineer

Coreway Solution. 2018 – 2021

- Built backend automation systems using Python for data processing, scheduled jobs, and API integrations.
- Developed rule-based workflows for document processing, notifications, and reporting.
- Implemented early NLP-based text handling and classification logic before large language models were available.
- Created scalable backend services with clean architecture and modular design.
- Worked closely with business teams to translate operational requirements into automated systems.

KEY PROJECTS

AI Workflow Automation Platform

- Built AI-powered automation pipelines using Python and LLM APIs.
- Implemented multi-agent workflows for task delegation and execution.
- Integrated with internal tools and third-party services via APIs.

PDF Chat & Document Intelligence System

Developed an AI-powered document interaction system allowing users to upload PDFs and chat with their content. Implemented text extraction, chunking, vector indexing, and Retrieval-Augmented Generation (RAG) to provide accurate, context-aware responses. Designed validation and fallback mechanisms to reduce hallucinations and ensure reliable answers.

Jewellery Image Identification & Attribute Extraction

Developed an AI-based image analysis system to identify jewellery items and automatically extract attributes such as type, material, design patterns, and key visual features. Integrated image processing pipelines with AI models to standardise product metadata and improve catalogue accuracy for e-commerce and marketplace platforms

RAG-Based Conversational Chatbot

Designed and implemented a Retrieval-Augmented Generation (RAG) chatbot for domain-specific knowledge access. Integrated structured and unstructured data sources, implemented semantic search, and ensured accurate response generation using controlled prompts and contextual grounding. Optimised response relevance and system performance for production use.

AI Workflow Automation Agents

Built AI-powered automation agents capable of executing multi-step workflows across systems. Integrated AI decision-making with n8n workflows for orchestration, approvals, retries, and monitoring. Designed agent systems to handle document processing, data synchronisation, notifications, and operational automation with reliability and auditability.

EDUCATION

July 2018 Graduated, Bachelor of Engineering in Information Technology
