

Niks R. | B.Tech

Full Stack MERN Developer

(Experience 6 Years)

ABOUT ME

Full Stack MERN Developer with 6+ years of experience in building scalable web applications and SaaS platforms. Strong expertise in designing RESTful APIs, developing responsive React-based frontends, and building secure, high-performance backend services using Node.js and MongoDB. Experienced in working with startups and enterprises, delivering production-ready solutions with clean architecture and performance optimization.

SKILLS

- **Frontend:** React.js, Next.js, Redux, Tailwind CSS, Material UI
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication
- **Database:** MongoDB, Mongoose, Redis
- **Architecture:** MVC, Microservices, API-first design
- **Integrations:** Payment gateways, third-party APIs
- **Tools:** Git, Docker, CI/CD pipelines
- **Other:** Performance optimization, security best practices

EDUCATION

March 2019 - Bachelor of Technology in Computer.

PROFESSIONAL EXPERIENCE

Senior Full Stack MERN Developer

Coreway Solution. 2019 – Present

- Designed and developed scalable MERN-based web applications and SaaS platforms.
- Built secure REST APIs consumed by web and mobile applications.
- Developed responsive React dashboards with role-based access control.
- Integrated payment gateways, email services, and third-party APIs.
- Optimized MongoDB queries and backend performance for high-traffic systems.
- Collaborated with cross-functional teams to deliver projects on time.

KEY PROJECTS

Scholar9 | react, Laravel | <http://scholar9.com/>

Developed a web-based education and research management platform using React for the frontend and Laravel for backend APIs. The system supports multiple user roles and permissions. Implemented custom modules, including a reviewer panel, profile approval dashboards, and journal & research database management with optimized indexing for efficient search, filtering, and data retrieval.

ScholarJMS | Node, React, NextJS | <http://scholarjms.com/>

Designed and developed a Journal Management System (JMS) for academic publishers using Node.js backend and React/Next.js frontend. The platform supports journal creation, article submission workflows, reviewer

assignments, editorial decision tracking, and role-based access control. Built modular frontend components and scalable backend services to support phased rollout and future enhancements.

Solar Light IOT | React, Node | <https://iot.rmstracker.com/>

Developed a real-time IoT monitoring dashboard for solar lighting systems using React and Node.js. The application processes device data, displays live status updates, generates automated reports, and sends scheduled email notifications based on configurable rules. Implemented cron-based reporting, backend data aggregation, and responsive admin dashboards.

Music Streaming Website| MERN

Developed a music streaming platform with subscription-based access using the MERN stack. Implemented secure user authentication, music streaming workflows, and recurring payment subscriptions using Stripe. Built AI-driven music recommendation features to suggest calm, mood-based, and personalized playlists during streaming. Designed scalable backend APIs and responsive frontend interfaces to ensure smooth playback and user experience.

Dataset Marketplace | MERN

Built a dataset marketplace platform using the MERN stack, enabling sellers to list datasets and buyers to request access or quotations. Developed custom listing layouts, advanced filtering, group-based access control, and Request-for-Quote (RFQ) workflows. Designed scalable APIs, secure authentication, and modular frontend components.

Live Admin Dashboard | MERN

Developed a live admin dashboard using the MERN stack with a custom UI theme and third-party system integrations. Implemented automated data import pipelines, multilingual support, and region-based configurations. Designed backend services for data normalization and frontend dashboards for monitoring and management.
