

Ravi C. | B.Tech
Full Stack Developer
(Experience 8 Years)

ABOUT ME

PHP Full Stack Developer with 8+ years of experience in building web applications, APIs, and business platforms using Laravel, Core PHP, and CodeIgniter. Strong background in backend architecture, database design, and frontend integration. Experienced in delivering secure, scalable, and maintainable solutions.

SKILLS

Backend: PHP, Laravel, CodeIgniter
Frontend: HTML, CSS, JavaScript, Bootstrap
Database: MySQL, PostgreSQL
APIs: RESTful APIs, OAuth, GraphQL
Architecture: MVC, multi-tenant systems
Security: Authentication, authorization
Tools: Git, Docker, CI/CD

PROFESSIONAL EXPERIENCE

Senior PHP – ERP & Full Stack Developer

Coreway Solution. 2017 – Present

- Designed and delivered custom ERP-style systems using PHP and Laravel.
- Implemented complex business workflows, including finance, reporting, approvals, and settlements.
- Built scalable backend architectures and admin panels for enterprise use cases.
- Worked closely with stakeholders to translate operational processes into technical systems.

KEY PROJECTS

Soolyn – Marriage Registry & Gift Management ER

Developed a custom marriage registry and event management ERP platform. Implemented gift wishlist management, guest tracking, event-based ordering workflows, and personalized registry pages. Designed backend logic for guest interactions, gift allocation, and transaction tracking, ensuring smooth coordination between hosts and attendees.

FinLedger – Financial Settlement & Reporting System

Developed a financial ledger and settlement system to track credits, debits, balances, and payouts across business operations. Implemented automated reconciliation, scheduled report generation, and audit-ready data structures. Designed the system to support monthly and on-demand financial reporting.

IOT Solarlight Dashboard | <https://solarlights.rmstracker.com/>

Developed ERP-style reporting modules for an IoT management platform. Implemented automated assignment of dealer and master user as per the group of devices and cron jobs with configurable scheduling. Enabled auto-email delivery of structured HTML reports based on backend rules.

OJSCLOUD | <http://soolyn.de/>

Developed and managed a SaaS-based platform providing journal publishing services, including journal setup, hosting, DOI-related workflows, and operational support for academic publishers. Built backend systems to onboard new journals, configure publishing settings, manage

subscriptions, and handle automated client lifecycle management. Integrated payment methods to support subscription-based onboarding and renewal of journal clients, with admin dashboards to monitor usage, billing status, and platform operations.

OpsFlow – Internal Workflow & Approval ERP

Built an internal ERP system to manage operational workflows, approvals, and task assignments. Implemented configurable workflow rules, permission-based dashboards, and automated notifications. The platform reduced manual coordination and improved operational visibility.

EDUCATION

March 2016 - Bachelor of Technology in Computer, INDIA.
